8. Operating Control Instruction

➤ Master/Slave

Master setting: The master should be one of following modes: built-in modes, color jumping Mode, fade mode, white strobe mode and manual dimming mode. It sends out synchronizing signal. To avoid the master signal and DMX512 signal from interfering with each other, we should cut off the DMX512 signal. When the signal cables are longer than 60 meters (32 sets) , a DMX signal amplifier is necessary.

Slave setting: It must be in the SLAV mode to assure receiving the master's signals correctly. Only one light can be set as a Master and others are slaves.

9. XLR cable connecting

➤ XLR cable:

The standard way of connecting the XLR is: one end connects to the male plug, and the other end connects to the female. As bellow: pin 1: ground, pin 2: negative signal, pin 3: positive signal

| XLR Pin Configuration | |
|-----------------------|------------------------------|
| Pin 1 | = Ground |
| Pin 2 | = Data Compliment (negative) |
| Pin 3 | = Data True (positive) |

Noted: In order to avoid failures and interference signal transmission, we connect a resistance 120Ω ($1/4W$) at the end of the DMX connecting as below:

Termination reduces signal errors and avoids signal transmission problems and interference. It is always advisable to connect a DMX terminal, (Resistance 120Ω $1/4W$) between PIN 2 (DMX-) and PIN 3 (DMX+) of the last fixture.

➤ The Conversion between 3 pin and 5 pin XLR

If the output cable of DMX512 controller is the 5PIN, please use 1pc 5PIN to 3PIN cable

| 3-Pin XLR to 5-Pin XLR Conversion | | |
|-----------------------------------|------------------------|---------------------|
| Conductor | 3-Pin XLR Female (Out) | 5-Pin XLR Male (In) |
| Ground/Shield | Pin 1 | Pin 1 |
| Data Compliment (- signal) | Pin 2 | Pin 2 |
| Data True (+ signal) | Pin 3 | Pin 3 |
