- Ensure that the stand is positioned on hard stable surface, in suitable location, on firm ground and clear of overhead obstacles.
- Stabilize legs before lifting the tower or any load.
- When outdoors, secure the tower with braces or cables, in case of wind.
- Check the cable, it should not show damaged or flattened areas nor broken strands.
- For Lifting the tower, turn the winch handle clockwise.
- For lowering the tower, turn the winch handle counter-clockwise.
- Loading on truss and stands should comply with rated weights.
- Lock all the safety mechanisms (safety pins, knobs)
- Loads must be centered & balanced on each lifting unit.
- Safety chains must be installed on each item attached to unit.
- Leave a safety perimeter with a radius 5ft greater than the maximum height of the stands during lifting and lowering of loads.
- During transport, close all the sections and lock the lifting carriage.
- Do not attempt to move the stand when loaded or in extended position.
- Servicing and repairs must be made by qualified persons.
- Cable, pulleys and telescopic masts must be inspected before each use. Any damaged cable must be replaced immediately.
- Annual inspection by an authorized technician is suggested
